

Continuous liquid seed treater WN-60

Description

- High-quality treating in continuous flow operation
- Suitable for all common types of grain and legumes
- Standardized treatment processes
- Seed dosing by means of weighing technology and rotary valve
- Perfect degree of liquid chemicals thanks to electronic metering technology of treating agent(s)
- Documentation of consumables (seed & treatment agents)
- Up to 8 individually programmable liquid chemical dosing lines possible
- Fully automatic treating operation with free selection of dosing systems
- Optimum grain-to-grain distribution by means of an evaluated distribution principle using brush augers

Functions

- Gravimetric seed metering by means of seed scales
- Highly accurate metering of liquid products using a feed pump and electrical flow metering technology
- 2x large-volume primary distribution of liquid products via spray disk (without nozzles)
- Gentle and optimum remixing using special nylon brush augers
- PLC control for fully automatic work processes
- Adaptive control device for balancing seed and treating agent
- Programmed seed and liquid chemical quantities are determined, checked and documented electronically
- Visualization via touch panel display
