

Continuous liquid seed treater

Type

WN 8/6

Capacity

1 bis 6 t/h

Description

- High quality treatment in continuous operation
- Suitable for all common cereals as well as for legumes
- Standardized treating process
- Mechanic dosing technology for seed and chemical liquid for a perfect treating grade
- Free selection of up to two liquid dosing units during automatic operation
- Optimal seed to seed distribution
- Homogeneous seed coating

Functions

- Volumetric scoop wheel technology for exact dosing of liquid products
- Seed metering roller for volumetric seed dosing
- Nylon brush auger for a gentle and effective mixture
- Contactor and relay control for automatic operation
- Capacity continuously adjustable (manual)
- After calibration a change of capacity effects an automatic adjustment of seed and chemical liquid

Options

- Up to two dosing units for liquid products
- Mixing tanks, conveying and weighing technique
- Flexible process adjustments (mechanical, electrical, programming) up to customers choice
